Nate Storey discusses financing today at 12 PM, MST:

What are the actual startup cost for an Indoor Farm?

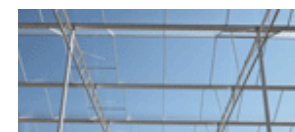

According to the [Hartman Group](#), locally grown produce is poised to surpass organic as a symbol of trust and authenticity. Indoor farming solves a real problem of meeting year round demand for local produce. Many entrepreneurs are wondering how expensive the facilities are, and how to arrive at a reasonable number for capital investment purposes.

Have you always have been curious about stepping into indoor farming but never had an idea of startup costs and financing strategies? Well, then you might consider to join today's live session from Bright Agrotech, which takes place at 12 PM MST.

Bright Agrotech's Nate Storey, PhD, has been consulting with dozens of projects to better understand the system design and costs. In this discussion Dr. Storey will share insights on capital expenses for a entry level indoor farm. The pricing for this system will include costs for the equipment, the nutrient automation system, and the lighting.

Additionally, we are seeing a number of approaches for financing these projects. Interested investors and entrepreneurs will take away a better understanding of the capital expenses for this kind of vertical plane growing system, along with some resources for understanding their financing options.
